

Risk Management is more important than ever in today’s digital economy and Rofori Corporation offers services and solutions to help your company understand and mitigate the risks within your organization.

The new data privacy laws are impacting all organizations, whether they are managing a supply chain or being a vendor within one. The need to execute best practices to be compliant effects everyone. Cybersecurity and data privacy are at the intersection of this compliance.

*The National Institute of Standards and Technology (NIST) makes available a widely adopted risk-based Cybersecurity Framework—a set of existing standards, guidelines and practices to help organizations manage cyber risks.*

For small businesses we offer a cloud-based solution, DEFCON™ Cybersecurity Risk Management, that utilizes 12 of the NIST CSF best practices. This solution offers inventory tracking, scanning for vulnerabilities in your network, and providing the remediation plan. This information will be reported to your technology team or provider to remedy, tracking your cybersecurity risk score over time.

For larger enterprises needing to validate cybersecurity and data privacy risk compliance within their supply chains, Rofori offers the cloud-based solution, DEFCON™ Data Privacy Risk Management, that aligns to the requirements of the GDPR, CCPA , and Privacy Shield.

Rofori Corporation understands the complexities of complying with the new comprehensive data privacy laws regarding PII, global and within the U.S. Look to Rofori for the advisory services to navigate this regulatory landscape along with our cloud-based solutions to ease the path to readiness.
