

# Dark Fiber

## High Capacity Bandwidth Dedicated to Your Business

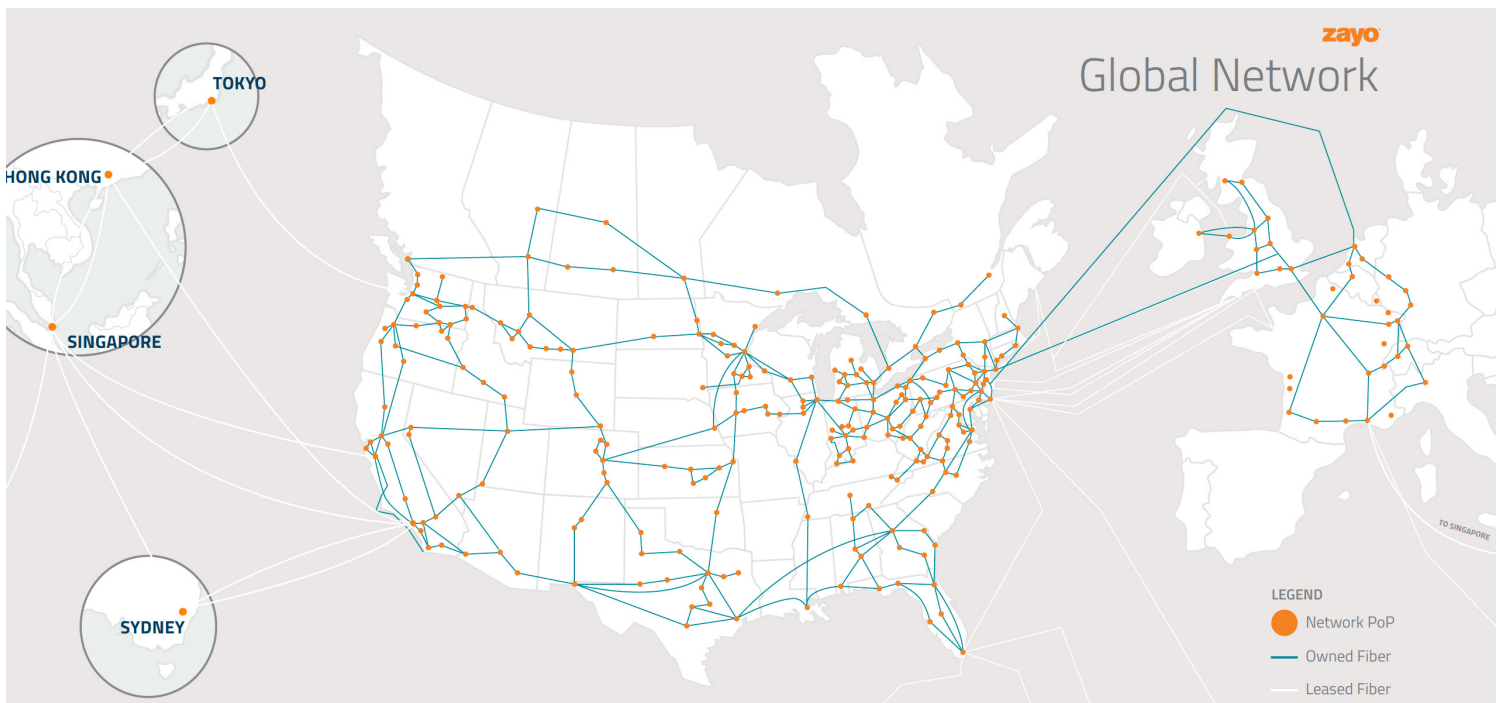

Your growing business demands an agile network infrastructure that can adapt and respond to a constantly changing business environment. If you're looking for scalable bandwidth and want to manage and control your network, then Zayo's extensive dark fiber network is the solution for you.

Zayo's Dark Fiber allows you to control every aspect of your network, including design, optronics, protocols and upgrades. Leverage our dense metro and long haul fiber footprint while maintaining operational control.

### Zayo's Dark Fiber Network

### Fiber You Control

- **Secure Network:** Leverage a fully dedicated, private physical network infrastructure
- **Unique Routes:** Our custom-built network provides extensive diverse route options
- **Scalable Bandwidth:** Grow your network capacity as your bandwidth needs increase
- **Flexible Design:** Easily align network components without changing your requirements
- **Cost Effective:** Get consistent monthly costs and low incremental cost per Mb

**13M** Fiber Miles    **12K** Data Centers Connected    **133K** Route Miles

## A Secure and Scalable Solution

- **Backbone Diversity:** Not all networks are created equal. Our diverse routes give you full access to our dense metro and long-haul fiber network.
- **Flexible Connectivity Options:** Whether your business requires ultra-fast connectivity all the time or just needs to be prepared for high-volume bursts of traffic, Zayo Dark Fiber offers a range of connectivity options to keep your network running at peak performance. A variety of pricing models are available and provide the ability to capitalize fiber lease as an asset.
- **Security & Control:** Hardened security should not come at the expense of control. With Zayo's Dark Fiber, you control the design, capacity and protocols of your own dedicated infrastructure which runs over Zayo's private optical, physically secure fiber network.

## An Expansive Network

- **Control your connectivity** strategy through Zayo's diverse and low-latency owned fiber network.
- **Expand your capabilities** through Zayo's fully managed and operated equipment services with cutting-edge data center, metro and backhaul solutions.
- **Increase your global reach** through thousands of miles of Zayo's long haul dark fiber network in North America and Europe. Seamlessly cross the border between US and Canada with Zayo's owned routes.
- **Gain easy access to intercity routes** with our dense metro dark fiber and fully diverse routes.

Zayo provides communications infrastructure solutions, including fiber and bandwidth connectivity, colocation and cloud infrastructure solutions to the world's leading businesses. Zayo's network in North America and Europe includes extensive metro connectivity to thousands of buildings and data centers. Zayo provides clients with flexible, customized solutions and self-service through Tranzact, an innovative platform for managing and purchasing bandwidth.

### The Zayo Difference

Zayo's team of dedicated subject matter experts have deep experience ready to serve you. We're committed to provide you with resilient and customized solutions that meet your needs.
