

Lunch & Learn: Get public cloud simplicity to your on- premises infrastructure!

Tuesday, January 25, 11:30am EST

[REGISTER NOW](#)

Hi,

A growing number of organizations are looking for the self-service ease, cloud-simple management and automation at-scale capabilities in their on-prem environment, which are traditionally only experienced with the cloud. The problem? You can't get there with legacy solutions like 3-tier architectures or Hyperconverged Infrastructure (HCI).

Leonard McDowell has partnered with Nebulon to bring you **smartInfrastructure**, a server-embedded, infrastructure software delivered as-a-service, which offers the benefits of the public cloud on-prem, from core to edge for any application.

Join this intimate lunch to learn how Leonard McDowell and Nebulon can bring the ease and simplicity of the public cloud to your on-prem application infrastructure and:

- Spend 50% less time managing infrastructure with a centralized management, monitoring & alerting across all sites, from the cloud
- Reduce infrastructure costs by 33% versus hyperconverged infrastructure as no resources are consumed by the data plane
- Deliver the benefits of the cloud for distributed application infrastructure on-prem
