

# Cyber Security Blanket

A Portfolio Offering from **LEONARD  
McDOWELL**

**Leonard McDowell** invests in and partners with innovative “rising star” organizations focused on protecting your key IT infrastructure investments from ransomware, malware, hacking, cloud limitations, downtime, and the like. As such, our portfolio of companies offers a “cyber security blanket” array of solutions to protect or enhance your infrastructure through advanced network threat detection and response as well as through zero-trust data protection and encryption.

Our partners are recognized as industry disruptors and best in class solutions. These companies are at the forefront of helping organizations take a more proactive and responsive stance in defense of their IT infrastructure investments. Regardless of what a software application can do for you on-premise or in the cloud, you must have a solution to protect your software investments and the precious data they accumulate and manage. The #1 commodity today is data and that is why less than trustworthy organizations are actively trying to steal yours every chance they get.

Leonard McDowell is an active business development partner for our portfolio clients. Our role is to create mutually beneficial relationships between solutions providers, service providers, and organizations with a leading-edge commitment to security from the edge to the core. If you would like to learn more about these organizations or you are interested in an introduction, please contact us at your convenience.

---

*“Our portfolio partners offer solutions that are easy to deploy and extremely cost effective. As a result, schools, municipalities, and businesses of all sizes can be more aggressive in defending their organizations from these very serious cyber threats.”*

**CEO & Founder, Frank Leonard**

## **Network Threat Detection & Response**

**Stamus Networks** provides high-performance, network-based threat detection and response systems on the global stage. We help your enterprise security team know more faster, respond sooner and mitigate their risk more completely with insights gathered from both cloud-based and on-premise network activity. Our solutions are advanced network detection and response systems that expose serious and imminent threats to critical assets and empower rapid response. Unlike other network security companies, Stamus Networks delivers meaningful detection at enterprise scale while avoiding exaggeration that is often employed by security vendors.

## **XQ Message Zero-Trust Data Protection & Encryption**

Data exfiltration attacks are increasing as a direct result of enterprises outsourcing key operations as well as from moving systems to the cloud. The greater the distribution of data, the higher the probability of exfiltration and it will only increase in the emerging 5G IoT world. To combat these threats, the XQ team of Silicone Valley software experts and Washington DC security experts has created a distributed data protection solution from scratch. Our **SMART “Zero Trust”** security model implements encryption, authorization, and policy enforcement at the edge and integrates tracking to detect data exfiltration attempts.
